# POTATO LOAN PROGRAM

CCC program non-recourse loans Irish potatoes now available to producers, cooperative associations and dealers on potatoes stored on farm or in warehouses located in producing areas. Program designed fulfill support price committments announced by Department Agriculture on February 3 and August 24, 1943, as part of production goal quota. Loans on graded and sacked potatoes will be made at support price levels; on ungraded potatoes in bulk storage at 35% cwt. less. Loans to cooperatives or dealers made on potatoes that have been purchased from producers at not less than equivalent of support price. Application for loan obtained from County Agricultural Conservation Committee from county in which potatoes stored. County committee will arrange for inspection, complete note and chattel mortgage, provide other necessary services on service fee basis. Loans are non-recourse as to market value. At maturity borrower may repay in cash or by delivery potatoes. Borrower responsible any deficiencies, quantity or quality of mortgaged potatoes. This responsibility alleviated by fact valuation applied to delivered potatoes rises seasonally in same manner as support price and for bin-stored potatoes by value of substandard portion of lot. County committees will make reinspections or special inspection at request of borrower and arrange for delivery or call loan if deterioration threatens.

SPECIAL NOTICE: W.F.A. announced railroads granted shippers privilege storing, packing, repacking and grading Maine potatoes in transit to most points east of Mississippi River. New Tariff, with charge of 7¢ per cwt. plus through rate, effective Oct. 22 for points south of Ohio River, and Oct. 23 for points north of that River. Action taken so bumper crop of Maine potatoes may be saved through movement substantial part as ungraded, field-run, in bulk at freight rates not prohibitive to shippers. shippers.

W.F.A. Oct. 13 requested Association of American Railroads publish blanket tariff because of relative shortage handling facilities in Maine and threat of waste. In past several weeks, W.F.A. has been requesting from railroads upwards 400 cars daily for outbound shipments from Maine, and now up to 500 cars daily. Estimated car requirements for entire crop 70,000 cars. (Issued Oct. 26, 1943).

COMMERCIAL TRUCK CROP NOTES - Released by Bureau of Agriculture Economics,

U.S.D.A. Washington, D. C.

ONIONS: Acreage of onions intended to be planted in south Texas for early Spring harvest is 44,000 acres compared with 28,000 acres harvested in 1943 and the 10-year (1933-42) average of 46,560 acres. Conditions are now favorable for active planting of onions in practically all Texas areas. Early planted onions in the Coastal Bend section continue to make good progress despite a deficiency of surface moisture.

Plant beds in the irrigated districts are in splendid condition.

In California and Louisiana 3,700 acres are intended for late spring harvest in 1944 an increase of 17 percent over 1943 and 21 percent above the 1933-42 average. Reports from north Texas and Georgia will not be available until November 23.

### LIVESTOCK MARKETS THIS MORNING

ATTENTION: Effective today WFA announced 90 day suspension all restrictions covering farm slaughter of hogs, to facilitate marketing and slaughter. Producers may kill for own use or sale or transfer to others all hogs they are able to handle. No license or permit required. Previous 400 pound limitation per producer lifted for three month period. Action applies for hogs only, not other livestock.

Requirements of OPA with respect to observance of meat price ceilings and collection of ration points in a reheart for meat delivered will remain unchanged.

NOTICE: EXCERPTS FROM "TRUCK CROP NEWS NOTES" released Nov. 17, New York Agricultural Statistical Service, Albany, N.Y.

POTATOES: The fall crop in the Lake Okeechobee section of Florida is in excellent condition and harvesting should commence around the 10th or 15th of December. The Ft. Myers crop is coming up and making satisfactory progress. The acreage in Dade County is now being planted. Indications are for slightly increased acreages in all areas.

ONIONS: Most of Wisconsin's crop is being held in storage. In California, the harvest is about completed and rail shipments are now being made out of the Central Coastal areas. The bulk of the loadings is destined for military purposes or on pre-season contracts to dehydrators.

### ONIONS - INTENDED ACREAGE

Reports on intentions to plant onions in early and late spring producing areas in Texas, California, Louisiana and Georgia indicate 70,000 acres will be planted

for harvest next spring compared with 48,650 acres harvested in the spring of 1943 and the 10-year (1933-42) average of 65,540 acres.

The indicated early spring acreage in south Texas is 57 percent above that harvested in 1943 but still is about 5 percent below the 1933-42 average. In central and north Texas, early reports indicate an acreage for late spring harvest 28 percent

greater than the 1943 harvested acroago and 44 percent above average.

Increases over 1943 are indicated for California and Georgia, with an acreage larger than average in prospect for California and about average for Georgia. The Louisiana acreage for 1944 is expected to be less than in 1943, but above average.

### OHION MOTICE

In all Texas areas prospects continue favorable; the cold spell did not cause any loss of plants. Some fields of young plants in the Coastal Bend suffered from continued lack of surface moisture. Light loss of plants was becoming general in this section, but the situation was materially improved by the mid-Movember rain that covered most of the onion area. Planting of additional acreage will be resumed as soon as field work can get started. Advanced plants continued to hold up well. A large acreage is now practically assured and crop prospects are favorable. Conditions were favorable for transplanting to get started in the irrigated sections and good progress was made towards completing planting the Raymondville crop. Contracting of plants for the North Texas crop has been active during November.

#### DAILY POTATO REPORT NO. 88 -

Wisconsin Department of Agriculture & Markets Waupaca, Wisconsin Saturday, Dec. 11, 1943

EXCERPTS: TEXAS COMMERCIAL VEGETABLE COMMENTS released by U.S. Dept. of Agriculture, Austin, Texas.

Austin, Texas.

ONIONS: Interest in onions is high in all early sections. Recent developments in the Raymondville and Wilson-Karnes districts indicate a larger acreage than earlier conditions indicated. Favorable moisture in the Wilson-Karnes resulted in growers being able to almost complete planting an acreage in excess of that of last year, and a large acreage in Raymondville is assured. Planting in the Coastal Bend continued and growing crops made excellent progress. All dry-land districts now have splendid moisture conditions. Transplanting activities in the Laredo and Winter Garden districts were slowed down by weather interruptions and the need for field workers in harvesting fall-crop vegetables. By the last week in November, field work was a few days behind schedule, but growers expect to set plants to the fields through all of December. Plants are still in good condition, and the soil is in better condition than usual, but growers are experiencing some difficulty in getting sufficient field workers.

CABBAGE: Harvest of the Lower Valley crop is started, supplies will gradually increase in December, but volume solid carlot shipments will not move until around the early part of January. Light supplies will be available in the Winter Garden district in December, mainly for mixed car tonnage and sales to truckers. The Coastal Bend district is not expected to have any production before January 15. Worm damage was evident in all early supplies, but this condition is greatly improved. Growing conditions are favorable and splendid progress was made in seeding and transplanting for late season harvest.

EXCERPTS from TRUCK CROP NEWS (As of December 1, 1943) Released by B.A.E., Washington,

D.C., Doc. 7, 1943.
COMMERCIAL EARLY IRISH POTATOES: In the Lower Valley of Texas, where most of the fall potato acreage is located, conditions have been favorable. A light harvest may start the early part of December, but supplies will not be available in volume until after the middle of the month. Most of the early tonnage will be used for mixed cars with solid carlots expected around January 1. Reports indicate that yields may average a little higher than usual. In Florida, the fall crop in the Lake Okeechobee section was attacked by blight following a series of showers during midNovember but no serious damage was done. The crop is well advanced and in generally
good condition. A few fields will be dug during early December but general digging
will not commence curtil around December 15. The Ft. Myers crop is making good progress. In Dade county planting operations were interrupted by rains and wet ground from November 17 to 25. There was some loss of acreage due to seed rotting in the ground. The crop was about one-third planted at the time of the rains. Planting is going on rapidly at present.
